

# README

## Sections

- 1 - Installation
- 2 - Usage (for end-users)
- 3 - Technical details

### 1 - Installation

To install Babel on your computer, you will have to start the `setup_babel.sh` script located in the downloaded repository.

### 2 - Usage (for end-users)

#### *2.1 : How to select a contact*

To select a contact, you can scroll the list on the left of the window and click on the contact that you wish to call.

#### *2.2 : How to make a call*

To make a call, you can click on the green button near the bottom of the window once a contact is selected to call this contact. Communication won't start right away, as the person you are trying to reach has to accept the call first.

#### *2.3 : How to accept a call*

When someone is trying to call you, Babel will ring and a pop-up window will appear, on which there are 2 options: "answer call" and "decline call". You will be able to choose what to do by clicking on the appropriate button.

#### *2.4 : How to hang up*

Once you are in a call with someone, you can at any moment hang up by clicking the red button near the bottom of the window.

### 3 - Technical details
